COPPER-NICKEL-COBALT AND GOLD PROJECTS

Goodwin Copper-Nickel-Cobalt Project - New Brunswick

- **Granges Zone**
 - 0.73% copper, 0.64% nickel and 0.05 % cobalt over 64.90 meter core interval
 - Includes 1.11% copper, 0.95% nickel and 0.07% cobalt over a 39.40 meter core interval
 - Deep Induced Polarization targets at depth
- **Farquharson Zone**
 - 0.39% copper, 0.35% nickel and 0.04 % cobalt over 60.60 meter core interval
 - Defined by 4 diamond drill holes over 150 m strike length x 40 thickness x 100 m depth
- **Logan Zone**
 - 0.66% copper, 0.43% nickel and 0.07% cobalt over 12.14 meter core interval
 - Open at depth and along strike

SLAM Exploration Ltd.

Menneval Gold Project

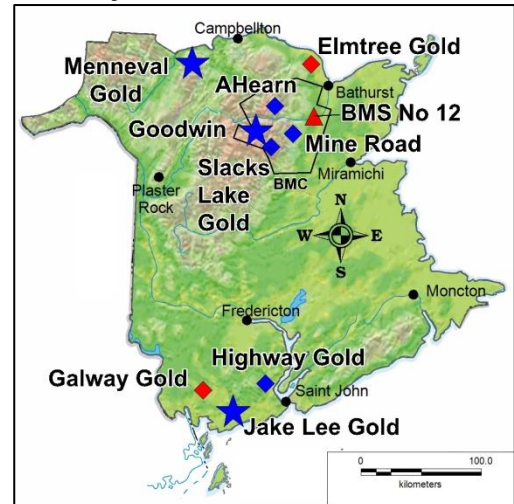

Assays are pending on 1,000 soil samples collected to expand and a 3,000 meter long gold soil anomaly associated with the Maisie vein system. The Company has reported numerous gold bearing core intervals including 162.5 g/t gold over 0.2 m and 56.90 g/t gold over 0.5 m from previous drilling on the Maisie gold vein.

Jake Lee Gold Project

SLAM prospectors made two new gold discoveries in 2025. SLAM reported 8 grab samples with assay values ranging from 7.42 grams per tonne ("g/t") to 94.80 g/t gold from trench JT25-01. A second occurrence comprises 2 slabs of gold-bearing float grading 3.78 g/t and 16.20 g/t gold 100 meters to the southwest.

Both gold-bearing zones are located roughly 2,000 meters east of the historic New River placer gold occurrence (No. 587 in the New Brunswick Mineral Occurrence Database, NBDNRE).

Slam Projects - New Brunswick - Canada

Jake Lee Project – Aeromagnetics, Gold Occurrences

Other gold occurrences on the 14,000 hectare Jake Lee project include:

Edge 15: Previous workers detected up to 5.0 g/t gold in 2 overburden drill holes.

BMS Float: A quartz boulder grading 302.5 g/t gold;

No. 16 Gold float: Gold-bearing quartz boulders grading up to 1.12 g/t gold.

Lepreau placer gold: Placer gold discovery dating back to 1895.

Gold stream sediments: 22 samples grading 0.20–3.58 g/t gold.

Gold soil geochemistry: One sample grading 10.00 g/t gold, 306 samples ranging 0.01–1.00 g/t.

This fact sheet contains "forward-looking information" within the meaning of applicable Canadian securities laws. Forward-looking information relates to future events or the Company's future performance and includes, but is not limited to, statements with respect to potential production, exploration and development activities, business strategy, future growth, results of operations, performance and business prospects. Forward-looking information is based on management's reasonable assumptions, estimates, expectations, analyses and opinions at the date the information is provided and is subject to known and unknown risks, uncertainties and other factors that may cause actual results, performance or achievements to differ materially from those expressed or implied by such forward-looking information.

Although the Company believes that the expectations reflected in such forward-looking information are reasonable, there can be no assurance that these expectations will prove to be correct. Readers are cautioned not to place undue reliance on forward-looking information. Except as required by applicable law, the Company undertakes no obligation to update or revise any forward-looking information contained herein. For additional information regarding risks and uncertainties, please refer to the Company's public disclosure filings available under its profile at www.sedarplus.ca.
